INDICATION AND IMPORTANT SAFETY INFORMATION

INDICATION

Pulmozyme (dornase alfa) is indicated, in conjunction with standard therapies, for the management of pediatric and adult patients with cystic fibrosis (CF) to improve pulmonary function.

In CF patients with an FVC \geq 40% of predicted, daily administration of Pulmozyme has also been shown to reduce the risk of respiratory tract infections requiring parenteral antibiotics.

IMPORTANT SAFETY INFORMATION

Pulmozyme is contraindicated in patients with known hypersensitivity to dornase alfa, Chinese Hamster Ovary cell products, or any component of the product.

The most common adverse reactions associated with the use of Pulmozyme include: voice alteration, pharyngitis, rash, laryngitis, chest pain, conjunctivitis, rhinitis, decrease in FVC of \geq 10%, fever, dyspepsia, and dyspnea. There have been no reports of anaphylaxis attributed to the administration of Pulmozyme. Mild to moderate urticaria and mild skin rash have been observed and have been transient.

PEDIATRIC USE

The safety and effectiveness of Pulmozyme in conjunction with standard therapies for cystic fibrosis have been established in pediatric patients. Use of Pulmozyme in pediatric patients is supported by evidence in the following age groups:

- Patients 5 to 17 years of age: A randomized, placebo-controlled trial of 303 of clinically stable cystic fibrosis patients 5 to 17 years of age who received Pulmozyme.
- Patients less than 5 years: Extrapolation of efficacy data in patients 5 years of age and older with additional safety data in 65 pediatric patients aged 3 months to less than 5 years who received Pulmozyme 2.5 mg daily by inhalation for 2 weeks.

The safety of Pulmozyme, 2.5 mg by inhalation, was studied with 2 weeks of daily administration in 98 pediatric patients with cystic fibrosis 3 months to 10 years of age (65 aged 3 months to < 5 years, 33 aged 5 to \leq 10 years). The PARI BABY™ reusable nebulizer (which uses a facemask instead of a mouthpiece) was utilized in patients unable to demonstrate the ability to inhale or exhale orally throughout the entire treatment period (54/65, 83% of the younger; and 2/33, 6% of the older patients). Overall, the nature of adverse reactions was similar to that seen in the placebo-controlled trials in older patients. The number of patients reporting cough was higher in the younger age group as compared to the older age group (29/65, 45%; compared to 10/33, 30%) as was the number reporting moderate to severe cough (24/65, 37%; compared to 6/33, 18%). The number of patients reporting rhinitis was higher in the younger age group as compared to the older age group (23/65, 35%; compared to 9/33, 27%) as was the number reporting rash (4/65, 6% as compared to 0/33, 0%).

You may report side effects to the FDA at **1-800-FDA-1088** or www.fda.gov/medwatch.
You may also report side effects to Genentech at **1-888-835-2555**.

For further information, please see the Pulmozyme full Prescribing Information.

Instructions for Patients

By completing this form you can:

- Learn about your health insurance coverage and other options to get your Genentech medicine.
- Enroll into national disease-specific education, patient support services and communication.

Please follow these 3 steps to get started:

- Read "About Your Consent."
- Sign and date page 3. Please note you must sign the form to get support for your treatment.
- Send in your completed form using one of the options below.

Genentech can start supporting you when page 3 of this form is submitted by you or your doctor's office in one of the following ways:

- Complete online at [GenentechAccess.com/PatientConsent](https://www.accesssolutions.com/PatientConsent)
- Take a printed form to (833) 999-4363
- Print, complete and fax to (833) 999-4363

If you have any questions, talk to your health care provider or contact Genentech Access Solutions.

Helpful Terminology

Genentech. The maker of the medicine your doctor wants to prescribe. Genentech is committed to helping patients get the medicine their doctor prescribes.

Genentech Access Solutions. A team at Genentech that works with your doctor and health insurance plan to help you get your medicine.

Genentech Patient Foundation. A program that gives free Genentech medicine to people who don't have insurance coverage or who have financial concerns and meet certain eligibility criteria.

Household size. Number of people living in your household, including pets.

Household income. How much you and the members of your household currently make each year minus specific deductions. This is also frequently referred to as your Adjusted Gross Income or AGI. This information is needed to determine Genentech Patient Foundation eligibility.

Education and patient support services. Optional programs offered by Genentech to help you start and stay on your medicine. Services may vary based on your medical condition and health history (e.g. eligibility, clinical support, marketing communication and general disease information, medication). The amount you pay for health care services or medicines out of pocket before your health insurance plan begins to pay.

Out-of-pocket costs. The amount not paid by the insurance plan that you must pay for your treatment. This includes deductibles, co-pays and co-insurance.

Change assistance. Programs available to help eligible patients pay for their medicines.

Alternate contact. Someone you choose to be your contact person if Genentech Access Solutions cannot reach you.

Receive free Genentech medicine from the Genentech Patient Foundation:

If each net net or gross net this medicine when it is shipped to you. I am responsible to make sure these medicines are sent to a secure address when shipped to me, and I must control any Genentech medicine that I receive. I understand that, for purposes of the law, the Genentech Patient Foundation would not be my agent for any IRS 3240 form or other proof of income.

Important Safety Information & Indication

Important Safety Information

Pulmozyme is contraindicated in patients with known hypersensitivity to dornase alfa, Chinese Hamster Ovary cell products, or any component of the product.

The most common adverse reactions associated with the use of Pulmozyme include: voice alteration, pharyngitis, rash, laryngitis, chest pain, conjunctivitis, rhinitis, decrease in FVC of ≥ 10%, fever, dyspepsia, and dyspnea. There have been no reports of anaphylaxis attributed to the administration of Pulmozyme. Mild to moderate urticaria and mild skin rash have been observed and have been transient.

Pediatric Use

The safety and effectiveness of Pulmozyme in conjunction with standard therapies for cystic fibrosis have been established in pediatric patients. Use of Pulmozyme in pediatric patients is supported by evidence in the following age groups:

- Patients 5 to 17 years of age: A randomized, placebo-controlled trial of 303 of clinically stable cystic fibrosis patients 5 to 17 years of age who received Pulmozyme...

Indication and Usage

Pulmozyme (dornase alfa) is indicated, in conjunction with standard therapies, for the management of pediatric and adult patients with cystic fibrosis (CF) to improve pulmonary function.

In CF patients with an FVC ≥ 40% of predicted, daily administration of Pulmozyme has also been shown to reduce the risk of respiratory tract infections requiring parenteral antibiotics.

Click the "Search Orders" button to launch a search box where you can search your placed orders.

If there are no items in your cart, then the copy order icon will be active and you can copy that order.

Clicking the carrot icon will expand or collapse the details about an item you recently ordered.
